

Superior Year-round Fairway & Sports Turf Fertilizers

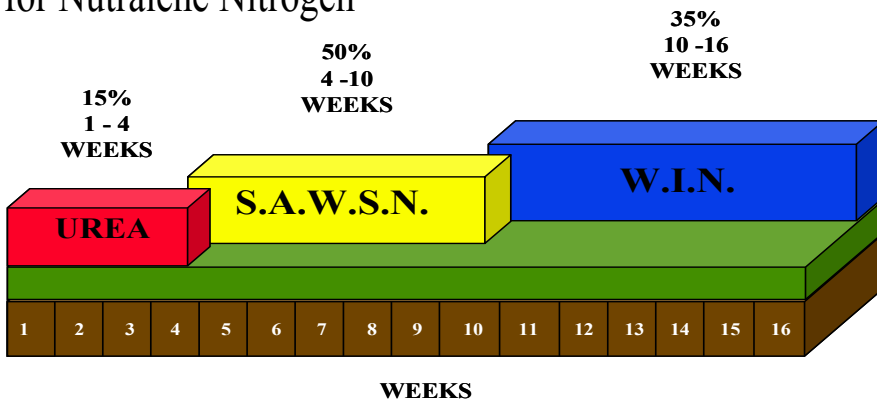

Andersons Golf SGN 125 Fairway Fertilizers have ideal particle size, and Nutralene® as a nitrogen source for use on fine turf. This combination will sustain turf feeding even after heavy rains, or can be used prior to mowing or other operations that cause particle fracturing in coated fertilizers.

Andersons golf fairway fertilizer can be applied to golf fairways, athletic turf and lawns throughout the year, providing excellent turf grass response Spring or Fall applications.

- Andersons reliable, time proven products help reduce turf surge growth and clipping yields making mowing operations more manageable
- The controlled-release mechanism of Nutralene helps Andersons fairway fertilizers sustain growth through the hot summer months without forcing turf growth
- The Andersons SGN 125 fertilizers contain lower salt index with Nutralene and Sulfate of Potash as the plant nutrient sources
- The Nutralene nitrogen in Andersons fairway products has a dual release mechanism for consistent release under a wide range of environmental conditions
- Get greater nitrogen efficiency from Andersons turf fertilizer with Nutralene because of reduced leaching and N volatilization into the atmosphere

Typical Timing Release Pattern for Nutralene Nitrogen

When Every Square Inch Counts™

Andersons 20-5-20

**50% Nutralene Minors
2% Iron – SGN 125**

- Spring / Fall balanced fertilizer where extra Potash is essential . Can be applied at 2-4 lbs. per 1,000 sq. ft.
- Nitrogen releases for 12 weeks between close cut fairway and high use athletic field applications
- Contains sulfate of potash for sulfur, micro's & 2% iron for quick green up
- SGN 125 granular size insures even application of product particularly when compared to other blended "mini" sized fertilizers
- The smaller SGN 125 particle size allows a greater range of application rates and uniformity in application when compared to competitive fairway products. Can be applied at 2 to 5 lbs. per 1,000 sq. ft.

Andersons 22-4-18

**93% Nutralene
1% Fe – SGN 125**

- Late Spring balance maintenance fertilizer to reduce mowing and provide summer long nitrogen release – Good for fairways and sports turf
- Contains Nutralene and potassium sulfate for lowered turf stress and great source of sulfur
- Smaller particle size than many greens grade fertilizers on the market. Smaller in particle size than many "mini" fairway products on the market for better uniformity of application
- Contains 1% Fe for quick green up of turf. Excellent all around 16 week release fertilizer
- Typical application rates of 2-4.5 lbs. per 1,000 sq. ft. This SGN 125 product applies more uniformly and with more particles per square inch compared to competitive products

Andersons 25-5-15

**50% Nutralene
1% Fe – SGN 125**

- Efficient early Spring / Fall fairway sports turf fertilizer to help repair turf growth while reducing the surge growth that accompanies many applications of non methylene urea fertilizers
- General purpose maintenance fertilizer for close cut fairways
- Helps athletic turf heal more quickly
- Nitrogen releases for up to 12 weeks
- Contains sulfate of potash for sulfur, iron and micro nutrients for improved early application turf color
- Smaller, more uniform SGN 125 particle size provides better coverage because there are more particles per square inch than "mini" sized competitive products
- Typical application rates of 2-5 lbs. per 1,000 sq. ft.

Andersons Golf Products® - see for yourself why they're the better choice!

Andersons fairway fertilizers with Nutralene brand methylene urea provides turf managers the flexibility to manage turf nutrient inputs. Nutralene nitrogen reduces nitrogen leaching, volatilization and turf surge growth; increasing the efficient use of nitrogen by turf grass plants, while fertilizing in an environmentally responsible manner.
